

INTERIOR DOORS

REEB[®] IN-STOCK INTERIOR STILE & RAIL CATALOG

Introduction

Interior Doors

Interior stile and rail doors are made from real wood bringing a warmth to any home. Reeb® stocks a number of species and designs to ensure that the style you are looking for is available. Reeb offers choices and options to help make the house feel like a home.

Wood Species

Reeb® stocks a variety of wood species to match any home's design. Staining a door brings a layer of beauty and sophistication to an area. Each species of wood has different characteristics, colors, and grain patterns which affect the stain application. To help understand which doors stain well and which are better painted, Reeb has created icons which identify the stainability of a species.

Glass Options

Glass brings additional natural light and warmth into a room. Clear glass brings the maximum natural light flow while frit or satin etch glass add privacy. To easily identify the level of privacy, a privacy indicator is included with each glass type below.

Clear glass provides the maximum amount of light with no privacy; Reeb's stock of clear glass is tempered.

Clear Beveled glass has a bevel to the edge of the glass to provide a decorative element.

Satin Etch glass is semi-opaque glass with an etched frosted texture on one side that resists dirt.

White Laminate glass offers the highest level of privacy with a vinyl interlayer between two pieces of glass, resulting in a smooth surface on both sides.

Frit glass in non-primed wood doors is a non-porous, semi-opaque glass with a texture on one side. The glass has a slight bluish gray appearance.

Get Creative

Add a level of creativity to the home by choosing one of these unique door styles.

Special Order Products

Reeb's in-stock collection includes many design options for your convenience, however the possibilities are endless. If you do not see what you are looking for in this catalog, it is likely we can still create it as a special order product.

Contact your Reeb® representative for custom door designs.

Wood Doors

CONSTRUCTION

For homeowners seeking a classic look, authentic stile and rail doors offer a level of detail and definition that cannot be matched. Stile and rail construction is architecturally correct and provides crisp shadow lines and highly defined panel details. Staining an interior wood door protects and enhances the natural beauty of real wood. Any door can be painted, however Reeb® stocks Primed Stile and Rail doors that are specifically designed for this purpose. **For more information, go to reeb.com/catalogs.**

- 1 Stile:** The stiles have a solid engineered core for added strength and stability.
- 2 Rail:** The rails are also made of solid engineered core.
- 3 Panel/Glass:** Panels can be wood to create a solid door, or replaced with glass to create a French door.
- 4 Dowel Pins:** Dowel pins are used to join the stiles and rails together.
- 5 Veneer:** A veneer is added over the core to create a smooth staining or painting surface.

Sharp Detail

Door components in a wood stile and rail door join together creating sharp shadow lines and greater definition.

Architectural Correctness

Each door is made with perfectly proportioned stiles, rails and panels that are created individually to ensure that every door is architecturally correct.

Panel Design

Doors can be designed with 3/8" flat panels or raised panels with an option of single hip or double hip.

Finishing

The surface of the door can be painted or stained depending on the wood species. Some species are easier to stain than others and we identify this with a "stainability" icon. **See page 4.**

Solid Engineered Core

The interior of a wood stile and rail door has a solid engineered core adding stability. Some doors may use an alternate core which can be wood block, wood stave or other engineered fiber product.

Dowel Pins

Traditional dowel pin construction creates a secure joint, connecting stile and rail components together.

Veneer

A high-quality veneer is applied on top of the core for a perfect staining or painting surface.

Ponderosa Pine

1-3/16" DOUBLE HIP RAISED PANEL

Ponderosa Pine is one of America's most abundant tree species. It has straight, uniform grain with minimal amounts of reddish-brown heartwood. The sapwood has wide growth bands, which are honey-toned or straw-colored.

Pine Louvers

Louver doors allow for air flow while providing privacy.

1-1/4" Louver Slats

When ordering a louver door, it is important to specify which side is the blind side. View the door as if you are in the inside of the room and the door is opening toward you.

When the Blind Side is on the Hinge Side, the Louvers run down, meaning you cannot see into the next room

When the Blind Side is on the Stop Side, the Louvers run up, meaning you can see into the next room.

PONDEROSA PINE

Bifolds are carton packed with track and hardware.

Knotty Alder

1-3/16" RAISED PANEL

Knotty Alder is a medium density hardwood with an even grain appearance. The wood is normally light brown with hues of red or peach. Its softer nature makes it easy to machine and receptive to a variety of stains and finishes.

Barn Door Hardware

Goldberg's line of interior, residential sliding barn door hardware kits make the most of the available living space, while adding a rustic, yet elegant look. All major components are manufactured from steel and come with a 1-year warranty.

For a more polished or contemporary look, solid stainless steel barn door track hardware is a great alternative. All the same accessories are available as well for a complete look.

Stops

Known as a “stop”, these small pieces of wood attach to a flat frame to give the door a place to stop. Optional Portaseal weatherstripped stops are available for use to prevent drafts.

PORTASEAL WEATHERSTRIP

Rabbeted Frames

Single Rabbeted

Single rabbeted frames mimic the appearance of exterior frames for interior use. This option may not be available in all markets so please confirm availability prior to ordering.

PRIMED

CLEAR PINE

PRIMED SOLID POPLAR

Double Rabbeted

Double rabbeted frames work well with either a 1-3/8" or 1-3/4" thick door. This option may not be available in all markets so please confirm availability prior to ordering.

PRIMED

CLEAR PINE

PRIMED SOLID POPLAR

Split Frames

Split

Split frames are two pieces of wood together which work well for odd wall sizes. This option may not be available in all markets so please confirm availability prior to ordering.

PRIMED

CLEAR PINE

Because of their construction, a split frame is able to work for a range of wall sizes. For example, Reeb® stocks a split frame that has a size range of 4-1/2" to 5-1/4" thick.

Also with split frames is the availability to use interior casing. When installing a split frame with casing, the two pieces must be taken apart. This allows Reeb to ship the unit with the casing pre-attached and ready for a complete install. This option may not be available in all markets so please confirm availability prior to ordering.

Sills

OAK SADDLE SILL

Oak saddle sills provide an aesthetic solution to residential threshold applications. If the unit does not include weatherstrip, a standard width saddle sill works well.

OAK SADDLE SILL WITH WEATHERSTRIP

For flat frames with portoseal or single rabbeted frames with weatherstrip, a wider saddle sill works best. It allows the bottom of the frame to sit flush on top of the sill. Three sided units do not need a sweep, but a four-sided unit will use a sweep for the best seal.

Hinges

BALL BEARING HINGES

Ball bearing hinges have a steel ball bearing, or buffer, in between the knuckles. Heavier doors put more stress on the hinges, so having the ball bearings reduces friction leading to better performance and longevity.

Ball Bearing Square

Ball Bearing Radius

NON BALL BEARING HINGES

Standard, or plain bearing, have no buffer between each knuckle of the barrel. This tends to wear the hinge down over time as the sections grind against one another and are better suited for lightweight doors.

Non Ball Bearing Square

Non Ball Bearing Radius

HINGE SIZES

Most interior doors are 1-3/8" thick and use 3.5" x 3.5" hinges. On an 1-3/4" door in an interior application Reeb® will automatically utilize a 4" hinge.

3.5" x 3.5"

4" x 4"

Baldwin®

Baldwin® believes that quality should never be a compromise. From using the finest materials to crafting hardware by hand, they are committed to creating high-quality hardware that not only looks beautiful and flawless, but also endures the rigors of time.

Finishing

HANDLING

1. Protect door from abuse and mishandling. Take special care with glass.
2. Avoid dragging doors across one another and keep doors clean.
3. Store flat on a level surface in a dry, well ventilated building.
4. Doors should be conditioned to average prevailing relative humidity of the locality before hanging.
5. Doors should not be subjected to extreme or rapid changes in heat or humidity. Avoid sudden changes such as forced heat to dry out a building.
6. If the doors are to be stored on the job site, all surfaces including ends and edges must be sealed with an effective quality oil-base sealer in order to prevent undue moisture absorption. Primers are not sealants.

GENERAL NOTES ON FINISHING

1. Before applying the first coat of finish, sand the entire surface lightly with 5/0 sandpaper (180 grit). This is to remove fingerprints and handling marks.
2. Adjust or align components if necessary before finishing. Wood panels “float” and may be knocked into alignment with a wood block and hammer. Be careful not to damage door.
3. After sanding, clean the door thoroughly with a cloth to remove all dust or foreign material. However, avoid using caustic or abrasive cleaners.
4. All surfaces of the door must be properly finished. The edges (top, bottom and sides) should be coated with each and every coat of finish that is applied to the exterior surface of the door. Doors must be dry before finishing. There can be significant humidity variance in homes from winter to summer and interior millwork will move. Finishing all sides properly protects your doors.
5. Note: It is the finisher’s responsibility to protect glass prior to and during finishing. If using tape, conduct a test of the tape being used on a small area of the glass before applying to a large surface. After finishing, remove the tape as soon as possible. If the glass has plastic film protection, removal of the plastic film protection immediately after applying the finish is required. Failure to remove the plastic film at this time may cause harm to the glass and will create difficulty in removing the film at a later time. Do not use razor blades or sharp objects to remove the film or clean the glass. These items will scratch the glass.

INTERIOR FINISHING - STAIN

All stained products should use a stain controller prior to staining. Some species stain better than others. Please see individual species for stainmeter.

A good preparation is critical for good results. Sand the door and keep it very clean. Use a tack cloth to remove all particulate matter. Apply stain conditioner following manufacturers’ instructions. Stain product and let dry. Finish with 2 or more coats of finish. InteriorClear finishes can be varnish, tung/teak oils, lacquers, etc.

Varnishes - Oil and water based. Oil finishes dry slower and give the finish coat a slight glow in color. Water based varnishes are fast drying and have little or no color and depth.

Oils like tung and teak oils are wipe on finishes. These dry slow and require many coats (4 or more). They typically give an amber color to the finish.

Lacquers are fast drying finishes that are durable and give a nice depth and soft color.

A NOTE ABOUT PINE.

Pine varies sometimes dramatically in density.

The best stained pine finishes come from Ponderosa Pine. This species has the best consistency in density and finishes nicely. This product is the “best” Pine door species. All exterior Pine doors are Domestic Ponderosa Pine.

The “White” pine product is beautiful in unfinished color consistency but has a characteristic of very pronounced color variation when stained. This product is great for Clear coats and paints. This is Reeb’s “better” Pine door.

Plantation Pine has very pronounced grain patterns. The trees it is made from are very fast growing and the growth rings are very large. It can stain inconsistently. This is a “good” pine door that is made very well and good for value stain/paint needs.

INTERIOR FINISHING - PAINT

Follow all manufacturer finishing instructions for the best result. Unprimed doors should be primed with a good quality primer followed by two or more top coats of good quality solvent-base or latex enamel paint. It is recommended that sanding be done between coats of primer and paint.

MAINTENANCE

Best results will include light sanding and thorough cleaning between coats of paint. Do not skip light sanding after applying the coat of primer. Take care not to sand any glass. Let paint dry between coats. Always use top quality brushes, rollers and paint.

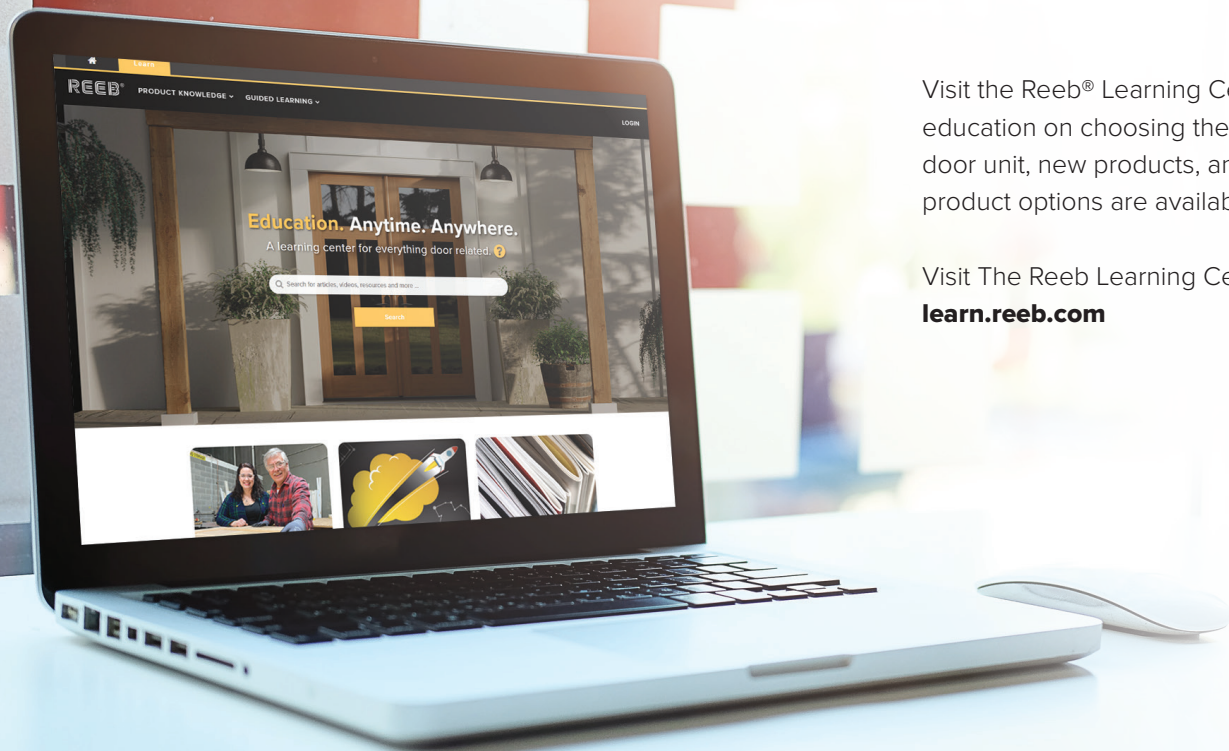

CHALKBOARD PANEL DOOR

Breaking in a new chalkboard door:

1. Wash the chalkboard surface daily with cool water for one week.
2. Wash only a small section at a time, immediately rubbing dry with a lint-free cloth.
3. Repeat until the entire surface of the chalkboard has been washed.
4. After washing, hold a stick of chalk flat on the board and cover the entire surface.
5. Erase evenly. The chalkboard is now ready to use.

MAINTENANCE TIPS:

1. Clean erasers frequently.
2. Use white chalk rather than yellow or colored chalk, as the pigments can make them more difficult to erase.
3. Wash the chalkboard weekly if necessary.
4. Look for high grade chalk (95% chalk with a 5% binder), as inferior chalk may permanently mark the chalkboard.

Visit the Reeb® Learning Center for education on choosing the proper door unit, new products, and what product options are available.
